Henry
A CARLISLE COMPANY

We stop leaks for a living.

So why are Tier 1 roofers leaking out?

Tier 1 roofer retention · Leadership review

Product, leads and price bring roofers in. Service lets them leak out.

What brings them in

- ✓ Silicone and SPF quality
- ✓ Leads that close
- ✓ Competitive pricing
- ✓ Flexibility on specs

What lets them out

- Hard to place an order
- Slow answers
- Unreliable deliveries
- Material not ready

Every leak on the right is ours. So is the fix.

Henry
A CARLISLE COMPANY

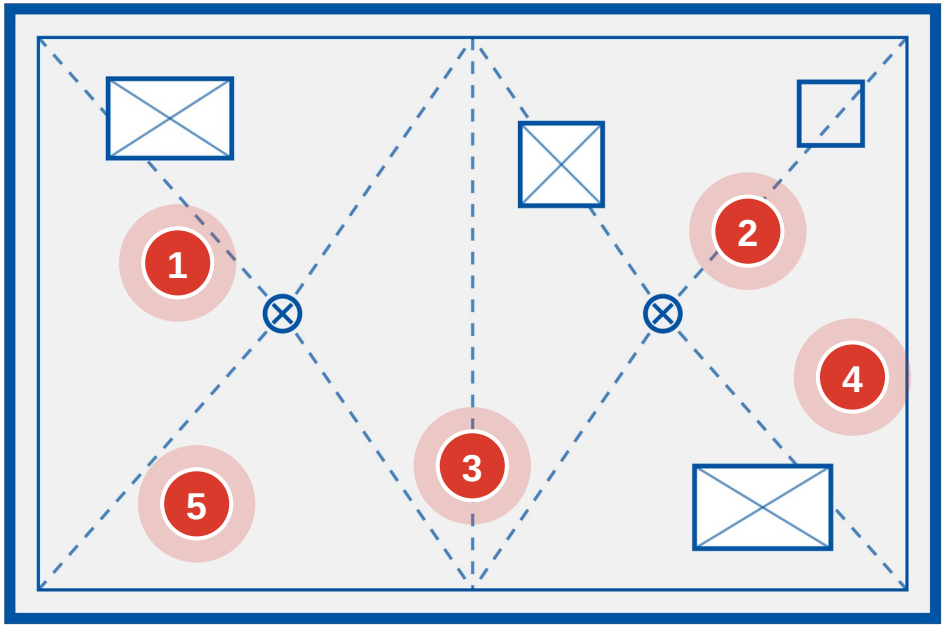

One order, five ways to lose a roofer

A composite of real customer feedback

They order	They ask	They need it	We ship	It lands
“24 drums of white silicone.”	*A question about the order.*	*Kingman is out of PG988.*	*Earlier than planned.*	*The drums arrive.*
We send a 200-SKU list and ask for the SAP number.	The answer takes more than 24 hours.	Carson has it. Nobody offers to ship it.	No call first. No one on site to sign for it.	The primer doesn't. The job can't start.
Leak 1	**Leak 1**	**Leak 1**	**Leak 3**	**Leak 4**

The roofer looks bad in front of the building owner. So does Henry.

We found five leaks. Every one is fixable.

1 Service — At risk
Roofers say we're hard to deal with

2 Warranty — At risk
Sign-offs and claims move too slowly

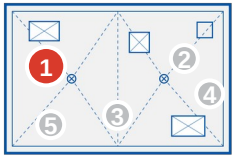

3 Logistics — Broken
Deliveries arrive late or unannounced

4 Material — At risk
Accessories aren't ready to ship

5 Leads — Watch
Leads close, but there are too few

Henry
A CARLISLE COMPANY

Leak 1: We’re hard to deal with

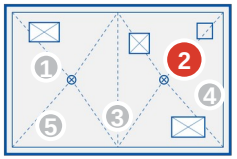

What roofers live with

- They ask for “24 drums of white silicone.” We ask for the SAP number.
- Questions, not even orders, wait more than 24 hours.
- Kingman is out of PG988. Carson has it. The roofer still waits.

The repair

- ✓ Take orders as written. If unclear, call.
- ✓ Answer every email within 4 hours.
- ✓ Show CS inventory at every plant, and train on substitutions.
- ✓ Hold people accountable for service.

Leak 2: Warranties move too slowly

Building owners expect action within

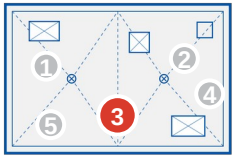

24 hours

- Our claim responses don’t keep up.
- Some manufacturers sign off without even walking the site.

The repair

- ✔ Acknowledge every claim by email within 4 hours.
- ✔ Visit the site within 4 days.
- ✔ Sign off fast. Walk the roof inside the 2-year window.
- ✔ Batch sign-offs 3+ hours from base to cut travel.

Leak 3: Roofers say we’re unreliable

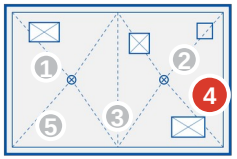

Material shows up a week early. No one is there to sign for it. The roofer looks bad, and so do we.

- No notice and no tracking.
- If we can ship early, we do, without asking.

The repair

- ✔ Ask before shipping early.
- ✔ Put trackers on every pallet and share tracking.
- ✔ Daily CS updates, without being asked.
- ✔ Move roofers to distribution, and work out how to honor their price.

Leak 4: No primer, no job

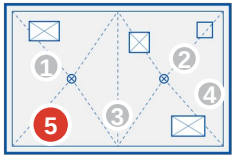

We can have trucks of 988. Without the primer, the job can’t start.

- Material isn’t ready to ship within 48 hours, and this isn’t new.
- No sprayable seam sealer for silicone. No cementitious coating for Arizona.

The repair

- ✔ Raise minimums on primer, bleed blockers and mastics.
- ✔ Ramp up production ahead of known storms and weather.
- ✔ Have accessories ready to ship within 48 hours.
- ✔ Name an owner for the system gaps.

Leak 5: Good leads, too few of them

What roofers live with

- Sherwin-Williams sends more leads, thanks to its paint contracts.
- Some manufacturers offer contractors discounted thermal moisture surveys.
- Our national accounts team spends its time firefighting and covering CS.

The repair

- ✔ Work with other Henry divisions on leads.
- ✔ Give the national accounts team its time back for lead generation.
- ✔ Moisture surveys: John T Hull.

While we fix the leaks, protect what already works

Core products

Silicone and SPF lead on quality and price.

Leads that close

National account leads close at a high rate.

Flexible on specs

Others ask for less. We stay willing to flex on scope and specs.

Few failures

One failure ends future work with a building owner. Keep innovating.

Four promises every roofer can count on

Promise	What it means	Plugs
4 hours	To answer every email and acknowledge every warranty claim	1 2
4 days	To visit the site on a warranty claim	2
48 hours	To have material ready to ship, accessories included	4
Daily	Order updates from CS, without the roofer asking	3

Decision today: approve the repairs and name an owner for each leak

Leak	Repair	We measure	Owner
1 **Service**	4-hour replies; inventory visible at every plant	Email response time	_____
2 **Warranty**	4-hour acknowledgement; 4-day site visit	Claim response time	_____
3 **Logistics**	Notice before shipping; trackers; daily updates	Notified, on-time deliveries	_____
4 **Material**	Accessories ready to ship in 48 hours	Orders ready in 48 hours	_____
5 **Leads**	Division partnerships; team time for leads	Leads delivered	_____
